Total	—	—	—	—	—

Although several solar power sites had recorded slightly lower power generation than expected, nevertheless an increased monthly sunshine duration throughout the nation had resulted power generation for April 2019 to reach 8,786,692 kWh, which is 9.0% higher than the estimated electricity generation on the basis of the expected amounts of electricity generation in the 50th percentiles of probability of exceedance.

(Note) The estimated electricity generation is the total of the expected amounts of electricity generation in the 50th percentile of probability of exceedance calculated by a third party on the basis of the database for hourly solar radiation for a year and others
