While solar power generation plants in several regions performed lower than estimation, increased monthly sunshine duration at the national level resulted in electricity generation for March 2018 to reach 6,575,020kWh, which is 5% higher than the estimated electricity generation on the basis of the expected amounts of electricity generation in the 50th percentiles of probability of exceedance.

(Note) The estimated electricity generation is the total of the expected amounts of electricity generation in the 50th percentile of probability of exceedance calculated by a third party on the basis of the database for hourly solar radiation for a year and others
