While solar power generation plants in several regions performed lower than estimation, increased monthly sunshine duration throughout the nation resulted in electricity generation for April 2018 to reach 6,721,378kWh, which is 3% higher than the estimated electricity generation on the basis of the expected amounts of electricity generation in the 50th percentiles of probability of exceedance.

(Note) The estimated electricity generation is the total of the expected amounts of electricity generation in the 50th percentile of probability of exceedance calculated by a third party on the basis of the database for hourly solar radiation for a year and others
