Due to relatively longer monthly sunshine durations in nationwide, power generation of the entire portfolio for December 2021 had reached 12,318,665 kWh, which is approximately 4.4% higher than the estimated electricity generation on the basis of the expected amounts of electricity generation in the 50th percentiles of probability of exceedance.

(Note1) The estimated electricity generation is the total of the expected amounts of electricity generation in the 50th percentile of probability of exceedance calculated by a third party on the basis of the database for hourly solar radiation for a year and others.

(Note2) CO<sub>2</sub> reduction is calculated as based on adjusted emission coefficient by electric power companies. For more details, please refer to the link (Japanese): <https://www.env.go.jp/press/files/jp/114735.pdf>
